## PREFACE

I have the pleasure in releasing yet another Ministry of Health Annual Statistical Bulletin, the results' of a year's dedication invested by all those involved in the compiling of once again this useful document. This document is designed to provide in a convenient publication format the latest key health statistical information for the Cook Islands on an annual basis. These statistics are presented as time series for the past five years.

The information contained in this report will be used by the Ministry of Health (MOH) to assist in identifying public health needs, in formulating future plans and advise the Minister of Health on how needs should be addressed, and in assessing progress towards the health outcome targets.

We believe that this report will also be of interest to others, because it provides information that is needed to debate about health needs and priorities that will benefit the people of the Cook Islands.

This bulletin provides key health indicators for creating framework adopted for our planners both in the public and the private sector.

My thanks are extended to the Statistics Staffs for their involvement with the compiling of this useful document in a continuous timely, reliable and quality health statistics. Acknowledgement's also goes to those Ministry of Health Divisional heads and their personnel for the continuous support of this document through their reports, and not forgetting our Outer Island Medical Officers.

For more detailed information or for information on subjects not dealt with or of individual interests, inquiry should be made through the Secretary of Health and the Director of Hospital Health Services.

Mr Tearoa M.C. Aorangi
STATISTICS MANAGER

## CONTENTS

1. POPULATION
2. HEALTH FACILITY
3. VITAL STATISTICS
4. BIRTH
5. MORBIDITY

7. MALIGNANT NEOPLASM
8. NON COMMUNICABLE DISEASE (NCD)
9. MORTALITY
10. HOSPITAL INDICES
11. OUTPATIENT
12. LABORATORY SERVICES
13. X-RAY SERVICES
14. FAMILY PLANNING
15. IMMUNIZATION
16. MOTOR VEHICLE TRAFFIC ACCIDENTS
17. FISH POISONING (CIQUATERA)
18. MEASLES
19. DENGUE FEVER

ANNEX A - Health Indicator

## 1. POPULATION

The total population of the Cook Islands reported in 2006 by the National Statistics Office was 19,569 . 9,932 ( 51 percent) were males and 9,637 ( 49 percent) females. 8,865 were aged between 15 to 44 years; 5,098 between 0 to 14 and 2,319 reported to having ages 60 years and over.

TABLE 1.1 Population by Region and Age Groups.
COOK ISLANDS 2006

| Region | Age Group |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 0-14 | 15-44 | 45-59 | > 59 | Total |
|  | Population |  |  |  |  |
| COOK ISLANDS | 5,098 | 8,865 | 3,287 | 2,319 | 19,569 |
| Rarotonga | 3,319 | 6,725 | 2,488 | 1,621 | 14,153 |
| Southern Group excl. Raro | 1,239 | 1,587 | 627 | 579 | 4,032 |
| Northern Group | 540 | 553 | 172 | 119 | 1,384 |
|  | Percentage Distribution |  |  |  |  |
| COOK ISLANDS | 26.1 | 45.3 | 16.8 | 11.9 | 100.0 |
| Rarotonga | 23.5 | 47.5 | 17.6 | 11.5 | 72.3 |
| Southern Group excl. Raro | 30.7 | 39.4 | 15.6 | 14.4 | 20.6 |
| Northern Group | 39.0 | 40.0 | 12.4 | 8.6 | 7.1 |

The graph below shows that majority of people residing in the Cook Islands were aged between 15 to 44 years. Those islands in the Southern Group excluding Rarotonga reporting the highest number of persons ( 14 percent) in the 60 years and over age group and Northern Group region reported the highest ( 39 percent) in the under 15 age group.

In Rarotonga, 47 percent of the population were between the ages of 15 to 44 years; 23 percent were between the ages of 0 to 14 ; 18 percent were between the ages of 45 to 59 and the remaining 11 percent were for ages 60 and over.

In the other Southern Group Islands 31 percent were 0 to 14 years; 39 percent were 15 to 44 years and 30 percent were 45 years and over.

In the Northern Group Islands, 79 percent were between the ages 0 to 44 years with age group 60 years and over reporting 9 percent of the Northern Group population.

## 3. VITAL STATISTICS

$>$ Since 1994, there has been a continuous decline in the number of births up to 2002 recording the lowest year ever reported in the Cook Islands
> 2007 number showed an increase of nine (14) births from previous year totaling at 320 live births
$>$ In 2007, 85 percent of births occurred on the main Island Rarotonga
> Mothers referred to the Rarotonga hospital for the delivery of their babies were recorded and reported for the Island of Rarotonga
$>$ Total deaths reported this year is 100
> Rarotonga reported a total death of 74 percent this year
> Infant mortality rate (deaths to less than 1 year age) reported to be 24.8 per thousand live births ( 8 cases, reported for the Islands of Rarotonga - 5, Pukapuka - 2 and Manihiki). Of the eight, three are males and five females.
$>$ Three (3) cases of fetal death (deaths that occurred after 20 weeks of pregnancy) were reported for this year accounting at a rate of 9 per 1,000 live births. All cases were from Rarotonga.

Note: 1. Excludes all Tourists dying in the Cook Islands.

## 4. BIRTH

321 women in the Cook Islands were reported to have given birth to a child this year
$>$ Two set of twins was reported for 2007 and both was delivered on Rarotonga
$>20$ to 24 year age groupings continued to record the highest number of mothers who giving birth (30 percent in 2007) since 2000

The average number of children (Total Fertility Rate) that would be born alive to a woman during her lifetime in 2007 remains at 3 (3.1)

TABLE 4.1: $\quad$ Mothers given Birth by Region \& Island and Age of Mother COOK ISLANDS 2007

| 40-44 |  |  | 20 | 24 | 13 | 24 | 29 | 38 | 31 | 33 | 38 | 47 |
| General Fertility Rate (GFR per ${ }^{\prime} 1000$ Women) |  |  | 120 | 112 | 95 | 95 | 91 | 92 | 97 | 93 | 97 | 101 |
| Total Fertility Rate |  |  | 2.6 | 2.4 | 2.1 | 2.9 | 2.7 | 2.8 | 2.9 | 2.8 | 2.9 | 3.1 |

GFR $=$ Total Number of Births/Female Population of CBA (15-44).
TFR = The average number of children that would be born alive to a woman during her childbearing years in her lifetime.
Note: Mothers whos age is $<15$ are included in the 15-19 age groups,
those whos age is $>44$ are included in the 40-44 age groups.

## 5. MORBIDITY

In 2007, diseases reported in the Rarotonga hospital for those been admitted for any sort of complaints were 2,630 ( 1,236 associated with males and 1,394 with females)
$>$ Over 66 percent of diseases and complaints from patients admitted were in the top ten leading causes with further 14 percent (371) were reported for those admitted in the maternity ward for delivery
> Diseases of the Circulatory System made-up of over 35 percent of the top ten causes of inpatient morbidity. Almost 40 percent of those was due to hypertensive diseases

Diabetes Mellitus comprises over 77 percent of all the Endocrine, Nutritional \& Metabolic Diseases \& Immunity Disorders as reported for patients admitted in 2007

## 6. NOTIFIABLE DISEASE

> The ten principal Notifiable diseases reported in the Cook Islands in 2007 were;

1. Acute Respiratory Infectious (ARI)
5,428
2. Influenza

4,385
3. Dengue Fever

1,224
4. Skin Sepsis

1,216
5. Asthma 834
6. Gastro Enteritis 822
7. Mumps 735
8. Pneumonia 537
9. Conjunctivitis 415
10. Diarrhoea (child/adult \& infant) 409
$>$ This year sees the re-emerging of the Mumps disease on all of the Islands
$>$ Acute respiratory infectious diseases include nasopharyngitis (common cold), sinusitis, pharyngitis, tonsillitis, laryngitis and tracheitis, upper respiratory infections of multiple or unspecified site, bronchitis and bronchiolitis, fever, sore throat, emphysema.

## 7. MALIGNANT NEOPLASM

> 471 cases were reported and registered at the Rarotonga hospital since establishing a register in 1981 to 2007
$>44$ percent were reported to be males and 56 percent were females
Cancer affects everybody but as shown in the table below, it mainly affects our older population and is more common in the over 50 age groups

TABLE 7.1: Reported Cancer Cases by Age Groupings and Sex. COOK ISLANDS 1991-2007

## 8. NON COMMUNICABLE DISEASE

Between 1980 to 2007 over 24 percent of the resident population were diagnosed and registered for hypertension and/or diabetes
$>$ The prevalence table count includes everyone registered from 1980 to 2007 inclusive of those that have died and those gone overseas throughout the years
$>$ Of those registered 65 percent were to have acquired hypertension only, 16 percent having both hypertension and diabetes and 19 percent having Diabetes only
$>$ Hypertension - 66 percent were registered for Rarotonga and 34 percent reported as residing in the outer islands
$>$ Diabetes - 57 percent were registered for Rarotonga and 43 percent reported as residing on any of the outer islands
$>$ Hypertension \& Diabetes together - 51 percent were registered for Rarotonga and 49 percent registered for the outer islands
$>$ Outer Islands - new cases reported shows another low count in the last five years from 107 in 2005 to 22 this year

## 9. MORTALITY

> 100 deaths were reported and registered in the Cook Islands in 2007 of which 74 percent were from Rarotonga
$>$ Diseases of the circulatory system continued reporting the highest causes of deaths in the last three years with 25 percent this year
$>$ Neoplasms showed an increase in the last three years from 56 deaths per 100,000 people to 144 this year
$>$ Diseases of the respiratory system recorded a rate of 59 deaths per 100,000 people this year showing a decline from 110 deaths in 2006
$>61$ percent of those dying were males and 39 percent were females for 2007
$>$ It should be noted that the numbers reported in the accompanying tables does not include tourists that died in the Cook Islands

Coloner cases are not included in the accompanying tables, as well as those Cook Islanders dying overseas

## 11. OUTPATIENT

$>71$ percent of patients came for consultation purposes with an average consultation visit of three, meaning that a doctor sees the same patient three times in 2007
$>15$ percent attended for injections and 10 percent attended for dressings only
> Consultations - 61 percent were for Rarotonga, 30 percent were from those in the Southern Group Islands and the remaining were reported for the Northern Group Islands
$>$ Other outpatient indicators reported were Minor Operations and other services such as the ENT clinics, EYE specialists, NCD clinics, Orthopedic, etc, visiting the outer islands and of course home visits conducted mostly in the outer islands

TABLE 11.1: Number of Outpatient Indicators.

Note: 1. Population numbers for 1991 and 1996 are from census results.
2. Cook Islands Population Estimates are from Statistics Office (MFEM) Quarterly Statistical Bulletin (Mid year populatiom estimated at June Quarter)
3. Rarotonga, Southern Group and Northern Group Population Estimates are calculated from the resident population change (1996-2001)

## 12. LABORATORY SERVICES

> 13,674 patients were registered by the laboratory services in the Rarotonga hospital this year. 99,457 examinations and tests were performed with an average of 7 tests; that is, on the average seven types of tests were performed for an individual patient
> 660 tests on Hepatitis B were performed and 2 percent were proven positive. A decline of 2 percent this year from 2006
$>$ Clamydia testing started in December 2007 with 34 tests performed resulting in seven (7) cases positive
$>$ VDRL, HIV, and STD tests were also performed at the laboratory

## 13. RADIOLOGY SERVICES

Examinations performed in 2007 showed an increased from 3,537 to 3,698 with an average of a single examination per patient
$>$ Total patients registered gradually increased from 3,356 to 3,668 in 2007
$>$ The total number of films exposed declined from 4,885 to 4,585 this year
Other examinations showed an increase of 12.4 percent of the total examinations due to the re-emergence of the mammogram examination program resulting with 8.5 percent

TABLE 13.1: Examinations and Films exposed by type RAROTONGA, COOK ISLANDS 1999 -
2007

| Year | Patients Registered | In-patient | Out-patient/Private | Films Exposed |
| :---: | :---: | :---: | :---: | :---: |

## 14. FAMILY PLANNING

The total number of women in Child Bearing Ages (15 to 44) in the Cook Islands reported in the 2006 population census was 4,460
$>$ Current users - 29 percent of Child bearing ages reported to were practicing any type of family planning contraceptives in 2007 with 53 percent using oral contraceptive and 38 percent using injections (depo provera)
$>$ New Acceptors - 188 reported were practicing any type of family planning contraceptives with 45 percent using oral contraceptive and 28 percent were using injections (depo provera)
> Current Users - 84 percent of those practicing family planning were residing on Rarotonga
$>$ New Acceptors - 72 percent of those accepting family planning practices were on Rarotonga

## 15. IMMUNIZATION

> The table below shows the percentage of children immunized in the first year of life (by 12 months of age) by type in the Cook Islands. This programme has been performed at the highest level, that is, a complete coverage in the last four years ( $100 \%$ )
$>$ The main island Rarotonga had over 100 percent coverage on children immunized before getting to the first birth with some children from the Outer Islands and returning New Zealand and Australia children being given immunization in Rarotonga.
$>$ This year marks the immunization of measles and rubella 1 replacing the measles only injection. This is seen in the table below with a 95 percent coverage reported.
> It should also be noticed that the percentages calculated in the table below were based on the surviving infants for each year

TABLE 15.1: Percentage Distribution of Children (<1) Immunized in the First Year of Life and Pregnant Women against Tetanus by Year.
COOK ISLANDS 1991-2007

## 16. MOTOR VEHICLE ACCIDENTS

$>79$ patients reported to have been admitted in the Rarotonga hospital due to motor vehicle accidents this year
$>53$ percent of these accidents were alcohol related
$>$ A total of five (5) deaths were reported from motor vehicle accidents in 2007. 60 percent of those that died were of alcohol related.
$>50$ percent ( 21 cases) of alcohol related accidents in 2007 were between the ages of 15 to 24
$>94$ percent of these transport accidents were motorcycle riders, three percent were pedestrian and 1 percent reported for the first time hang-glider accident injuring the occupant
$>54$ percent of these transport accidents suffered head injuries

## 17. FISH POISONING (Ciguatera)

> 245 cases of fish poisoning were reported and seen in the Cook Islands in 2007. 75 percent are reported for the Island of Rarotonga
> 184 cases were reported for Rarotonga alone, and 20 percent ( 37 cases) were hospitalized
$>$ Of the Outer Islands Aitutaki reported to have seen 41 cases, Mangaia - 5, Atiu - 13 and Mauke with 2 cases.

## 18. MEASLES

Measles is a contagious viral infection. It has many complications that may occur, especially in children (i.e., Conjunctivitis, Pneumonia, Otitis Media, Tuberculosis). The Incubation period is $10-12$ days. Epidemics can occur and measles is very serious in malnourished children. Infectious 2-4 days before rash until the rash disappears
$>$ The number of people infected with measles in the Cook Islands has been below twenty (20) in the last eight years following an epidemic in 1997
> It should be noted that the following cases were clinically diagnosed. No laboratory testing has been done to confirm any of the following

TABLE 18.1: Clinically diagnosed cases of Measles by Year and Month. COOK ISLANDS 1980-2007

## 19. DENGUE FEVER

Dengue fever is an acute viral infection transmitted by the Aedes aegypti mosquitoe. In some areas the same virus causes haemorrhagic fever, which can be fatal. An attack provides immunity against a particular viral strain for about a year. Mosquitoes become infective about $8-12$ days after biting an infected person and remain infective for life.

During the current epidemic laboratory tests were used to confirm cases up-to the end of November. Cases reported for December onwards were based on clinical diagnosis applying the following case definition:
"An acute febrile disease characterized by sudden onset of fever, with two or more of the following; muscle ache, joint pains, inappetence (loss of diet), nausea, vomiting, throat pains, abdominal pains, cough, low platelet count and bleeding."
> This year's epidemic continues from 2006 with the first case confirmed for the end of May. After this another case was confirmed for June followed by three cases for July.
$>232$ cases were reported for the month of January peaking in February and slowly descending to two cases in August and started the upward trend again in September
> Confirmed cases during this epidemic was of dengue-2 and dengue-1 type
> The outbreak was severe in Rarotonga and also affecting most of the Outer Islands.
$>$ Outer Islands affected during this time around are Aitutaki, Mangaia, Mauke, Mitiaro and Penrhyn in the Northern Group reported cases most of these cases were people that have visited Rarotonga.
> No deaths were reported during this outbreak but 10 percent of the Rarotonga cases are being admitted in the hospital for management
